

**Flood Watch  
Bancroft District****NEWS**Monday, April 15, 2019  
**11:15am**

The Ministry of Natural Resources and Forestry (MNR) - Bancroft District is advising area residents that a Flood Watch is in effect for Bancroft District.

Residents of Bancroft District should keep a close watch on conditions, regularly check for updated messages and exercise caution near fast-moving rivers and streams. Please alert any children under your care to these dangers and supervise their activities. Residents who have a historic susceptibility to flooding should take appropriate precautions to protect their property, such as ensuring sump pumps are functioning and securing items that may float away as water levels rise.

MNR is closely monitoring the weather and developing watershed conditions. Further updates will be issued as appropriate.

**TECHNICAL INFORMATION*****Description of Weather System***

This message is being sent on the basis of information received from MNR - Surface Water Monitoring Centre, MNR - Aviation Forest Fire and Emergency Management Services, Trent Severn Waterway (TSW) and Environment Canada.

The 5-day forecast suggests 35-40 mm of rainfall with most of the precipitation falling from today to Friday. Air temperatures are forecasted to reach 18°C and remain above freezing overnight. Night temperatures will tend to stay above 0°C across the entire district. Another moisture laden system is expected to move in towards the Easter weekend that could bring an additional 30+ mm of rain.

**Description of Current Conditions**

With the onset of the snowmelt, water levels and flows are rising rapidly in northern areas. Snow amounts are above average for this time of the year in the most northern areas of the Gull River system. Most lakes on the Gull River and Burnt River systems remain below average but are rising due to the onset of the melt. Lake levels are monitored daily and assessed in relation to estimated runoff amounts. The flows on Gull River and Burnt remain above average due to the snowmelt and operational activities. Flows on both rivers are anticipated to increase with increased runoff from the forecasted precipitation. The flows on

the York River are rising rapidly and will likely start to impact flood susceptible properties before the weekend.

Due to mostly frozen conditions, the ground's ability to absorb runoff and snowmelt is limited. The potential exists for nuisance flooding of roadways, ditches, and low-lying flood-prone areas as the melt progresses. There may be potential for minor ice jam related flooding on some rivers. A close watch on local forecasts and conditions is recommended.

The MNRF and TSW continue to closely monitor local lakes and rivers as the freshet progresses.

The MNRF is in regular communication with partner agencies and water control structure operators, including Conservation Authorities, Ontario Power Generation (OPG), Bracebridge Generation and TSW.

**Expiry Date:**

This message will expire on 04/18/2019 11:59 PM

**Terminology: Notification Levels**

WATERSHED CONDITIONS STATEMENT – WATER SAFETY: indicates that high flows, melting ice or other factors could be dangerous for such users as boaters, anglers and swimmers but flooding is not expected

WATERSHED CONDITIONS STATEMENT – FLOOD OUTLOOK: gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high winds or other conditions

**FLOOD WATCH: potential for flooding exists within specific watercourses and municipalities**

FLOOD WARNING: flooding is imminent or occurring within specific watercourses and municipalities
